

Dear participants,

students prepare and design at the Stuttgart Cooperative State University currently design and develop an online platform where people with extraordinary talents and gifts can find housing or jobs such as in electrosmog-free, pollutant-free or fragrance-free environments. The students need our support to develop the platform and would like to know what electro- and chemical-sensitive, or health-conscious people want for their homes and workplaces.

Click here for her survey:

Further the survey will provide valuable input for political work so that the group of EHS and MCS people becomes visible as a large group! Dr. Judith Rommel leads this project (judith.rommel@dhbw-stuttgart.de) and is supported by Prof. Mario Babilon and the Kompetenzinitiative e.V. in Germany. For example, with results of the survey politicians, municipalities and social housing initiatives can be approached - providing an opportunity for all of us to discuss pollutant free housing and jobs in public.

Therefore we need as many of us as possible to participate in the survey. Will you help? It takes about 10 - 20 minutes to complete the survey.

Please also forward it to others!
